- This test is closed notes and closed book.
- You may **not** use a calculator.
- In order to receive full credit, you must **show your work**. Be wary of doing computations in your head. Instead, write out your computations on the exam paper.

- Raise your hand if you have a question.

- 1 (6 points) The graph of the function $f(x)$ given below has domain $[-6, 8]$. Use it to answer the questions below.

If you are asked to determine a limit, find the limit or one-sided limit as directed. Use ∞ and $-\infty$ where appropriate. If the limit does not exist and cannot be described using ∞ or $-\infty$, write "DNE".

(a) $\lim_{x \rightarrow -3^-} f(x) =$ 1

(c) $\lim_{x \rightarrow -3^+} f(x) =$ DNE

(b) $\lim_{x \rightarrow 1} f(x) =$ 2

(d) $\lim_{x \rightarrow 4^-} f(x) =$ ∞

- (e) At what x -values in its domain is $f(x)$ NOT continuous? If f is continuous everywhere on its domain, write "none".

①

at $x = -3, 1, 4$

- (f) At what x -values in its domain is $f(x)$ NOT differentiable? If f is differentiable everywhere on its domain, write "none".

①

- (g) What are the x -values corresponding to local maxima of $f(x)$? If there aren't any, write "none".

①

at $x = -4, -1, 1, 8$ ← optional

- (h) What are the x -values corresponding to absolute maxima of $f(x)$? If there aren't any, write "none".

①

none as $f(x) \rightarrow \infty$ as $x \rightarrow 4^-$
